Transport Rerouting Decision Policy

SYN-POL-05 | Version 1.0 | Status: Synthetic MVP guidance

Synthetic operational knowledge created for the Option C Logistics project demonstration. This document is not a real company policy and must not be used for live operational decisions.

Purpose	Define when rerouting should be evaluated and what evidence is required before approval.
Applies to	Supply-chain disruption agent demonstration, operations review, and RAG retrieval testing.
Decision authority	Human operations reviewer. The AI system provides evidence and recommendations only.
Evidence rule	Use only observed tool evidence, model output, and retrieved guidance. Do not invent operational facts.

1. Rerouting triggers

- HIGH predicted delay risk with corroborating operational evidence.
- Material weather or transport disruption affecting the planned destination or route.
- A verified destination, capacity, customs, port, or carrier constraint.
- Inventory criticality that cannot tolerate the expected disruption period.

2. Decision factors

- Expected delay reduction compared with the current plan.
- Additional transport and handling cost.
- Route, mode, hub, and carrier feasibility.
- Weather exposure along the alternative route.
- Supplier availability and inventory criticality.
- Customer-service, customs, safety, and compliance impacts.

3. Decision workflow

1. Confirm that the risk gate requires investigation.
2. Validate the disruption evidence and identify what part of the route is affected.
3. Generate at least one feasible alternative and a no-change baseline.
4. Compare delay reduction, cost, operational risk, and inventory impact.
5. Document limitations and request human approval.
6. Monitor the shipment after any approved route change.

4. Prohibited shortcuts

- Do not reroute automatically because a shipment is MEDIUM risk.
- Do not reroute solely on low-severity destination weather.
- Do not claim a route is feasible without route or carrier evidence.
- Do not present a recommendation as an executed action.

5. Approval record

Current plan	Mode, route or hub, expected arrival, and known constraints.
Alternative	Proposed mode, route or hub and supporting evidence.
Trade-off	Expected delay reduction, added cost, and residual risk.
Approver	Named human decision owner and timestamp.
Monitoring	Post-decision checkpoints and escalation conditions.
